

Arkansas Reproductive Health Monitoring System

Summary of Selected Birth Defects in Arkansas For Birth Year of 2013-2017

The Arkansas Reproductive Health Monitoring System (ARHMS) is an active population-based surveillance system for monitoring birth defects. Specially trained, credentialed Health Information Specialists review and abstract medical records to ascertain birth defect cases. ARHMS, also known as the state's birth defect registry, collects a wide range of congenital anomalies including major structural and chromosomal defects. Cases diagnosed prenatally and up to two years old are included and followed up to five years of age. The birth defect registry covers births to residents in all 75 counties of Arkansas. Modified British Pediatric Association codes (which is based on ICD-9-CM) and ICD-10-CM coding systems are used to identify and code diagnoses in the database. At this time, the ARHMS repository is current to the birth year of 2017. This report focuses on the results of the latest five years of data available. The table in this summary reports the prevalence on selected defects from ARHMS. (Most are National Birth Defects Prevention Network (NBDPN) reportable defects).

Yearly averages in Arkansas for 2013-2017

More than 38,040

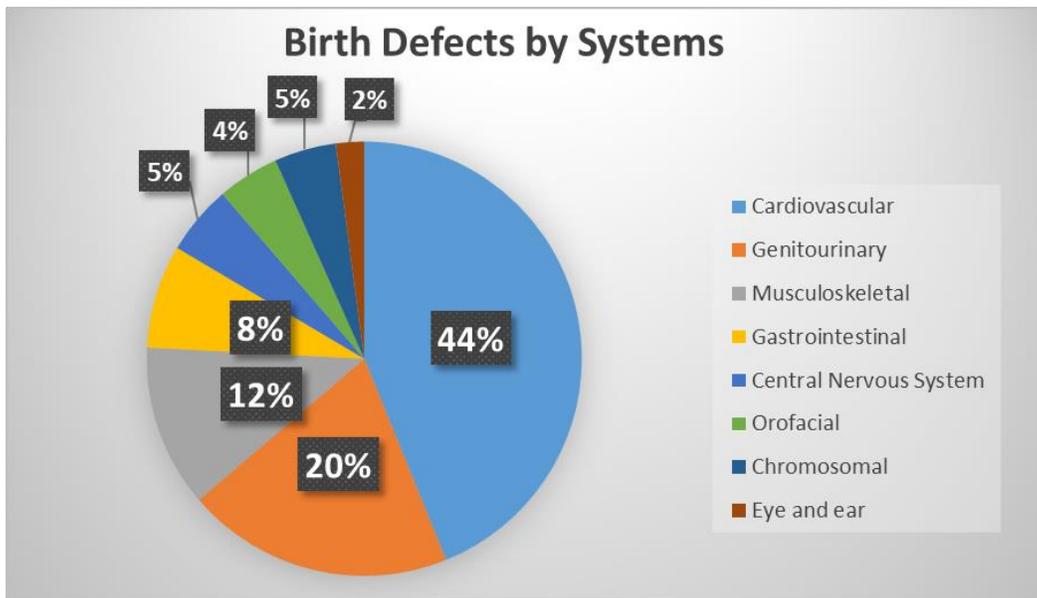

babies are born

1,380

babies born with birth defect(s)

3.6%

births with birth defects

Prevalence of Selected Birth Defects by Diagnosis and Year of Birth for Arkansas, 2013-2017

Defects by Diagnostic Category	2013	2014	2015	2016	2017	2013-17
